Abstract

This document describes the messaging protocol for use by mailers and their consignees. The Mail.XML™ Transaction Protocol defines the roles and responsibilities of Shippers and Consignees and defines the format and method for message exchange. This messaging protocol is designed to be XML and Web-Services compliant.

About Mail.XML™

Mail.XML™ is bringing a paradigm change to the industry by increasing business function specific B2B (Business to Business) communication within the industry that supports automation and in the end enables cost avoidance and higher profits through improved competence and effectiveness of communication. Mail.XML is designed to increase efficiency and lower costs by removing many manual data entry processes and enabling quick near real time communication between business partners. Mail.XML currently supports container based scheduling, pick up and drop off business processes, as well as identifying different business entities responsible for performing different services such as quality of mailing, address correction, and delivery confirmation on a mailing. The core focus of Mail.XML is communication between industry members and from industry to the final mail processing and delivery organization that delivers the mail to the end consumer, e.g., USPS. In the next few versions of Mail.XML the focus moves across mailing supply chain channels, and includes advanced functions such as payment; automated verification; enabling first, second, and third party communication and incorporating presort planning, printing, and distribution processes.

What's New in Mail.XML Version 23.0?

With this release, the Mail.XML Messaging Protocol moves to Version 23.0. In addition to minor cleanup, this release supports Mail.dat modernization and provides a new message for mailers to notify USPS of transportation dispatch details.

Changes supported by Mail.XML 23.0 include:

- Add a new element as part of MailCharacteristic Incentive block to allow users to provide data associated with Group ID for Electronic Sample of Mailpiece (eMailpieceSampleGroupID).
- Updates to ContainerScanQueryRequest to allow users to enter more than one ContainerID to request for status on more than one containers.

About Mail.XML Schema Modularization

Today Mail.XML messages are grouped into 8 message types.

- Transportation Messages (TM)

- Mailing Messages (MM)
- Data Distribution Messages (DD)
- Dynamic Payment Template Messages
- Identification Messages (ID)
- Supply Chain Messages (SC)
- Informed Visibility (IV)
- System Messages
- Base: Shared simple types
- Definitions: Shared complex types and elements

The simple types shared across 2 or more modules are found in the Base schema. Likewise the shared definitions module contains complex type definitions and elements that are shared across 2 or more modules.

Mail.XML Module Versioning Rules

The following versioning rules will be followed:

- The Mail.XML wrapper schema**.xsd) will always be given the next higher version number (or Errata designation) when any update is made to base, defs or any module. The name of the .xsd file will indicate the new version and the new version number will be used in the namespace and target declarations: `xmlns:Mail.XML="http://Idealliance.org/Specs/Mail.XML23.0/Mail.XML"`
`targetNamespace="http://Idealliance.org/Specs/Mail.XML23.0/Mail.XML"`
- When updates are made, only those modules that are updated will be given the next higher version number (or Errata letter designation).
- If updates are made to the base or defs, then the base and defs xsds will be given the next higher version number (or Errata designation) and all modules that call to them will also be given the next higher version number (or Errata designation).

For example:

- If the wrapper version is labeled as
`xmlns:Mail.XML="http://Idealliance.org/Specs/Mail.XML15.0A/Mail.XML"` then at least one of the XSDs is at same version such as filename ='Mail.XML_15.0.A.xsd' <- Errata A
- If the wrapper version is labeled as
`xmlns:Mail.XML="http://Idealliance.org/Specs/Mail.XML15.0B/Mail.XML"` then at least one of the XSDs is at same version such as filename ='Mail.XML_15.0B.xsd' <- Errata B

- If the wrapper version is labeled as `xmlns:Mail.XML="http://Idealliance.org/Specs/Mail.XML15.0/Mail.XML"` then at least one of the XSDs is at same version such as filename ='Mail.XML_15.0.xsd' <- Major Version

Mail.XML 23.0 XSD Modules:

The following Mail.XML XSD modules/namespaces are used:

- `Mail.XML_tm.xsd`: This module contains all the transportation (or FAST) messages and the attributes, elements and complex types that are unique to these messages. Namespace=`Mail.XML_tm`:
- `Mail.XML_mm.xsd`: This module contains all the mailing messages (eDoc) and the attributes, elements and complex types that are unique to these messages. Namespace=`Mail.XML_mm`:
- `Mail.XML_iv.xsd`: This module contains informed visibility messages and the attributes, elements and complex types that are unique to these messages. Namespace=`Mail.XML_iv`:
- `Mail.XML_dd.xsd`: This module contains all the data distribution messages and the attributes, elements and complex types that are unique to these messages. Namespace=`Mail.XML_dd`:
- `Mail.XML_id.xsd`: This module contains all the identification messages and the attributes, elements and complex types that are unique to these messages. Namespace=`Mail.XML_id`:
- `Mail.XML_sc.xsd`: This module contains all the supply chain messages and the attributes, elements and complex types that are unique to these messages. Namespace=`Mail.XML_sc`:
- `Mail.XML_defs.xsd`: This module contains all the common definitions of attributes, elements and complex types that are used across two or more message types. Namespace=`Mail.XML_defs`:
- `Mail.XML_base.xsd`: This module contains simple types that are shared across two or more modules that make up Mail.XML. These can be considered a building block for any message group. Namespace=`Mail.XML_base`:
- `Mail.XML.xsd`: This module contains the system messages of Mail.XML and is used to build custom profiles for Mail.XML. Namespace=`Mail.XML`:

A blue-bordered box labeled "mailxml_mm:Submitting Software..." contains a small grey square connector pointing to a yellow-bordered box labeled "mailxml_defs:submittingSoftwareType". This yellow box is a complex type definition containing five attributes: "SoftwareName" (xs:string), "Vendor" (xs:string), "Version" (xs:string), "ApprovalDate" (xs:date), and "ApprovalKey" (xs:string). The "ApprovalDate" and "ApprovalKey" fields are enclosed in dashed boxes, indicating they are optional or have specific constraints.</p>

element MailPieceCancelRequest

diagram	<p>The diagram illustrates the structure of a <code>MailPieceCancelRequest</code> message. It starts with a <code>MailPieceCancelRequest</code> element, which is described as "Request to cancel a mail piece." This element has three children: <code>SubmittingParty</code>, <code>SubmittingSoftware</code>, and <code>SubmitterTrackingID</code>. The <code>SubmittingParty</code> child has three children: <code>UserLicenseCode</code>, <code>MaildatJobID</code>, and <code>TransmittedCount</code>. The <code>TransmittedCount</code> child has two children: <code>PDRMailPieceBlock</code> (with multiplicity 1..∞) and <code>PDRRangePieceBlock</code> (with multiplicity 1..∞). Both of these blocks have a child <code>MailPieceID</code> (with multiplicity 1..∞). The <code>MailPieceID</code> child has a child <code>PieceRangeID</code> (with multiplicity 1..∞). The <code>TransmittedCount</code> child also has a child <code>CustomerGroupID</code>, which in turn has two children: <code>MailingGroupID</code> and <code>TransmittedCount</code>. This second <code>TransmittedCount</code> child has two children: <code>MailPieceBlockGroup</code> (with multiplicity 1..∞) and <code>MailXMLPieceRangeBlock</code> (with multiplicity 1..∞).</p>

element QualificationReportSummaryCreateRequest

diagram	<p>The diagram illustrates the structure of the QualificationReportSummaryCreateRequest element. It consists of a main element box labeled "QualificationReportSummaryCr..." which contains a detailed description of the element's purpose and usage. A line connects this main box to a larger box representing its attributes. Inside this attributes box, there is a group element labeled "grp mailxml_mm:MailXMLQual..." containing several attributes: "mailxml_mm:CustomerGroupID", "mailxml_mm:MailingGroupID", "mailxml_mm:Replace", "mailxml_mm:MixedMailFlag", "mailxml_mm:TotalMessageCount", "mailxml_mm:TotalDocVersionWi...", and "mailxml_mm:LastMessage". Below the attributes box, another line connects to a box representing the element's children. This children box contains four items: "mailxml_mm:SubmittingParty", "mailxml_mm:SubmittingSoftware", "mailxml_mm:SubmitterTrackingID", and "mailxml_mm:OnePassPlannedOrActualFlag". Each of these children items has a plus sign icon to its right, indicating they can have further sub-elements.</p>
